

Multiboard® Barrier

For special requirements

It takes a special kind of board to package food. The packaging must not affect the flavour or aroma of the packaged product. Multiboard® Barrier is a polyethylenecoated board that has been specially developed for fatty or moist products. It has a moisture barrier that protects and preserves the flavour and aroma of the products. The fact that Multiboard® Barrier is manufactured from 100 % recycled fibre provides clear environmental benefits, in line with today's demands for a sustainable society.

- **Strong Nordic fibres** make Multiboard® Barrier one of the market's strongest board qualities based on recovered fibre. This means that it can often be selected with the same or lower grammage than other board qualities while still achieving the desired stackability.
- **Smooth runability through packaging machinery.** Multiboard® Barrier withstands powerful, repeated folding without splitting or wearing. The layer composition is delaminated in a well-defined line. This gives Multiboard® Barrier high performance on both printing and packaging lines.
- **Excellent stackability.** Multiboard® Barriers's multi-layer design and its fibre composition provide excellent stackability.
- **100 % recycled fibre.** The fact Multiboard® Barrier is manufactured from 100 % recycled fibre provides clear environmental benefits.

Multiboard® Barrier is available for the grammage 280, 300, 325, 350, 375, 400, 425, 450, 475 and 500 gsm.

Multiboard® Barrier is suitable for fatty, frozen and moist food or detergents.

STRENGTH 95 %

FAT RESISTANCE 88 %

MOISTURE RESISTANCE 100 %

MULTIBOARD®

Multiboard® is a range of strong, environment-friendly, value-for-money packaging boards that have been developed for creative, functional packaging solutions.
